LegacyAI

AI-Assisted Wealth Transition & Emergency-Fund Diversification

Bridging Generational Trust: AI for Asset & Family Transitions

Central Michigan University

Vrutant Vyas · Rishita Arora · Prosper Mapepa · Riya Gurung

Built for PNC Private Bank · Scenario: Inheritance & Intergenerational Wealth Transfer

Live prototype — QR on final slide

Banks keep parents. They lose the kids.

The retention cliff at intergenerational transfer

97%

Parent retention

Schwab — clients stay

20–45%

Heir retention

Cerulli / Natixis

81%

Heirs plan to switch

Capgemini — stated intent

Our thesis

Heirs don’t leave because families are unhappy — they leave because no trust exists with the bank before the money moves. LegacyAI earns that trust early: consent-first family continuity + advisor intelligence that turns idle cash into a calm, advisor-approved plan.

Market opportunity — and what is at risk

Inheritance scenario: capture net-new assets and retain relationships at transfer

$105T

Expected to pass to heirs by 2048

Cerulli Associates, 2024

~$4.8T/yr

Average annual transfer, 2026–2048

Team calc. from Cerulli

$2.6–$3.8T/yr

Addressable transfer flow we bridge

Market opportunity band

$26–$38B

1% of that flow — annual upside scale

Illustrative capture band

Customer discovery → product decisions

Friction themes from published research + dual-persona journey testing on the prototype

Friction	What we heard / read	How LegacyAI responds
No bank relationship before transfer	Heirs meet the institution after money moves.	Family Hub: invite next-gen earlier; heirs see a plan while Principal is present.
Cold outreach breaks trust	Advisors need warm intros, not surprise calls.	Consent gate: Outreach locked until Principal taps Allow call.
Idle cash vs. emergency fear	Excess cash stays liquid because crises feel sudden.	AI sizes a 3-month reserve, then risk-aware growth — advisor + customer approve.
Privacy is the deal-breaker	Families will not share if answers feel exposed.	Role-based desks; private lessons; no inferred external-bank activity.

Sources: Cerulli, Capgemini, Natixis, Schwab, BlackRock. Primary journey validation via working prototype.

One family. Four roles. One path.

Dual-sided journey: Advisor Workbench ↔ Client / Family Experience

Report

Decision trail

Nothing moves without Principal consent and advisor judgment. AI calculates. Humans decide.

Advisor Intelligence Workbench

AI Client Analysis ranks who needs a conversation — explainable priority, not a black box

Where AI works

- Ranks clients by idle cash & spending
- AI Priority + why this customer

Where humans decide

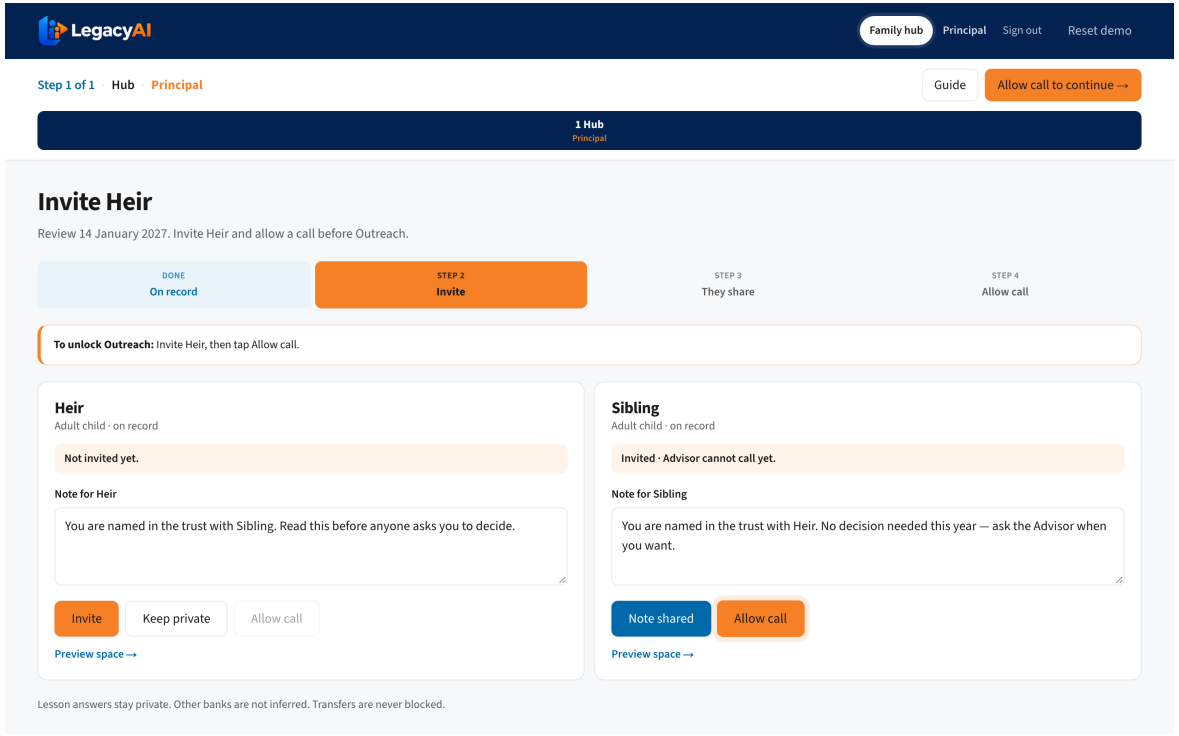

- Advisor owns the brief
- Outreach locked until Allow call

Specific, not vague

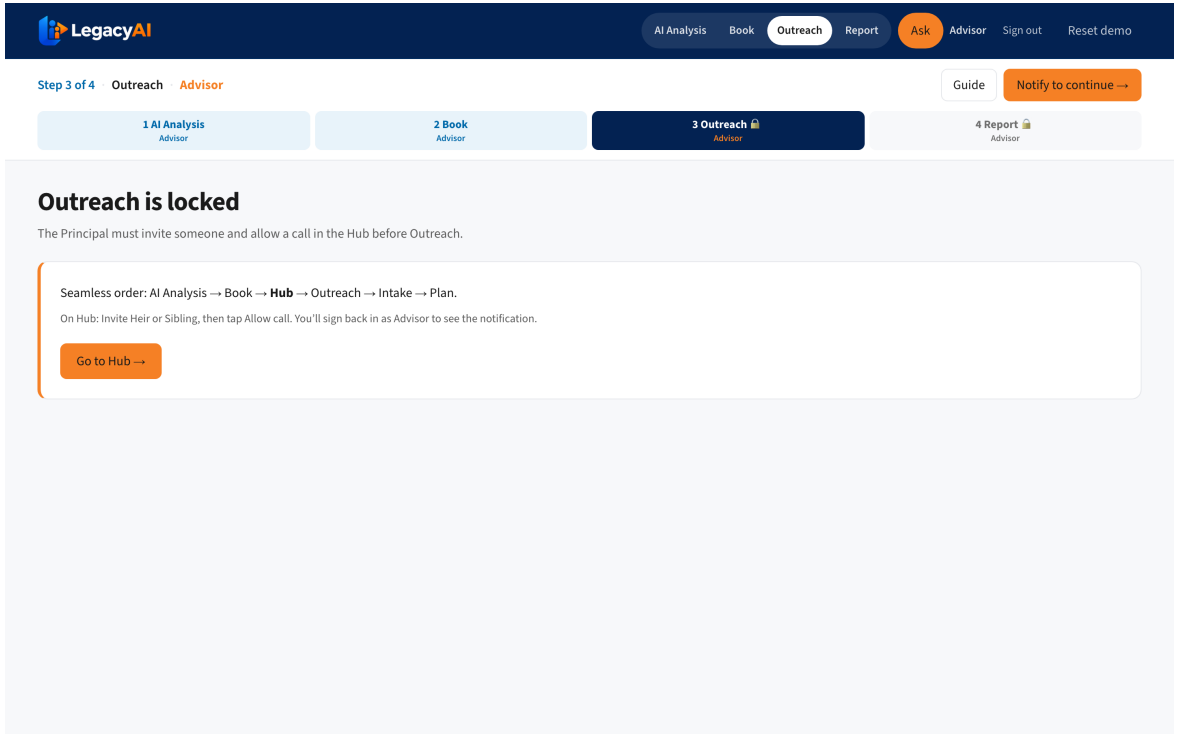

Rules + figures on the bank record — never inferred external activity.

Client & Family Experience

Principal controls the invitation. Heirs get clarity without pressure.

Family Hub — Invite, then Allow call

Outreach locked until consent

Secret sauce — consent-gated continuity OS

Generative AI is common. A hard consent workflow on the bank record is not.

Consent as infrastructure

Outreach cannot start without Principal Allow call. That single gate is our unfair workflow advantage.

Multi-role truth model

Advisor, Principal, Heir, Sibling see different desks from the same household record — role ACL, not one shared inbox.

AI calculates / humans approve

90-day emergency reserve, risk-aware split, care-cost set-aside. Advisor sets the plan; customer confirms.

Hard to copy

Competitors can add chatbots. Copying a bank-integrated, consent-first, dual-sided OS requires product + compliance + culture change.

Business thesis & adoption hypotheses

How LegacyAI creates ROI — and what we must prove next

Value creation

- Retain inherited PNC deposits that would leave at transfer
- Capture net-new assets via heir onboarding + idle-cash plans
- Increase advisor capacity with ranked book + briefs
- Grow deposit margin and advisory fees on plan assets

Hypotheses to validate

H1: Consent-first outreach lifts heir meeting conversion vs. cold call

H2: Advisors adopt ranking if briefs save ≥15 min / household

H3: 3-month reserve + growth split increases plan acceptance

H4: Pilot vs. control shows 6–12 mo retention lift on inherited assets

Finalist roadmap — and try the live prototype

Iterate with deeper discovery, GTM, and measured pilot design
